## KT-DL5A/KT-DL5B Vertical Freezing Automatic Decap Centrifuge

## Features:

1.Maintenance-free high-torque AC variable-frequency motor microcomputer-controlled speed regulation, high precision, ultra-low noise, fast lifting speed.
2.Blue back-lit digital / liquid crystal display: speed, time, centrifugal force;
cumulative time operation and fault display can be set arbitrarily.
3.A variety of automatic protection functions: automatic door lock, door cover, over-speed, unbalanced full electric control, etc.
4.Adopt flexible shaft drive system to ensure stable operation, low vibration and low noise.
5. Unique design, universal cap removal for vacuum blood collection tube, to achieve centrifugation and cap removal at one time, the success rate of cap removal of blood collection tube is $>=95 \%$, suitable for $100 \mathrm{~mm} / 75 \mathrm{ml}$ blood collection tube.

NOTE: At present, hospitals generally use vacuum blood collection tubes when collecting blood samples. After completion of blood centrifugation, the cap must be manually removed, which is inefficient. The vibration generated when removing the cap may cause blood to remix and increase the risk of bacterial infection. Our company has specially developed an automatic centrifuge for cap removal, which has solved the problem of cap removal for vacuum blood collection tubes in hospital for many years.
